

Compiled November 1955
Issued December 1955

ADVANCE ESTIMATES OF PUBLIC ELEMENTARY AND SECONDARY SCHOOLS
FOR THE SCHOOL YEAR 1955-56

Prepared by
Research Division, National Education Association of the United States

AS COMPARED WITH the school year 1954-55, the present report shows that 1955-56 will be characterized by:

- an increase of 1,273,000 in enrolments in public elementary and secondary schools
- an increase of nearly 51,000 in instructional staff
- an increase of \$630,000,000 in current expenditures
- an increase of \$11 in the average expenditure per pupil in average daily attendance
- an increase of 3.8 percent in the average salary of instructional staff (classroom teachers, principals, and supervisors)
- a relatively static condition in the number of teachers who hold emergency or temporary certificates

THIS SUMMARY is a series of estimates based upon information supplied by state and territorial departments of education and education associations. It is the fourteenth in a series of national estimates begun in 1942-43.

Most of the figures are estimates based upon facts of previous years, adjusted by expert opinion and preliminary state studies. A number of the states have not completed their statistical compilations for 1954-55 and only a few have systematic data for 1955-56.

On the basis of previous experience it is believed that the present summary presents a reasonably accurate picture of nationwide conditions as of October 1955. Adjustments of facts of individual states may be expected from official studies in the next two years. Elaborate manipulation of these figures, beyond those shown, is not advisable.

Most of the foregoing changes were not unexpected but some of them, such as increasing enrolments, indicate a further piling up of the instructional, financial, personnel, and housing problems which have adversely affected schools during the past few years. In several respects the outlook for 1955-56 is clearly unfavorable:

- The enrolment in teacher-education institutions is not gaining rapidly enough to fill the need for qualified teachers.
- The accelerated growth in pupil enrolments is still compelling school systems to employ large numbers of teachers who are not fully qualified for standard certificates.
- The shortages in buildings and qualified teachers continue to deprive 850,000 to 900,000 pupils of full-time schooling.
- The shortages of buildings and qualified teachers, especially critical in the elementary schools in recent years, are now producing serious problems at the secondary-school level, especially in urban school districts.

The gain of 51,000 in the total number of instructional staff, between 1954-55 and 1955-56, took place at the same time that the number of emergency teachers remained relatively static between 80,600 and 80,800 (see Table 4).

Number of emergency teachers--In 1939-40 there were relatively few classroom teachers who did not hold "regular" certificates for teaching in their respective states. While state standards of preparation required of emergency teachers vary widely, as they do also for those holding standard certificates, the total number of emergency teachers both within a single state and for the nation as a whole is indicative of the shortage of qualified teachers. Actually, it is an understatement of the shortage since the total includes two other conditions which are not readily measured: (a) the number of unfilled positions or vacancies and (b) the number of classroom teachers needed to reduce classes to reasonable size.

The number of persons employed who held substandard certificates was about 1 in 340 of the public-school teachers in 1940-41; the proportion jumped to 1 in 7 by 1946-47. Then the proportion declined steadily from year to year until it reached 1 in 15 in 1951-52 and 1952-53. The ratio was 1 in 14 for 1953-54, 1 in 13 for 1954-55, and is expected to be 1 in 14 in 1955-56.

The 1953 report estimated that about 71,000 emergency classroom teachers would be employed in 1953-54. The actual number was close to 79,000. The outlook in October 1954 was that the total would be 80,680 in 1954-55 and the present survey indicates that actually public schools employed 80,674 in 1954-55. The outlook for 1955-56 is that the total will be 80,815. The "emergency teacher" situation, thought to be a condition which would disappear within 10 years after World War II, is now apparently static (Table 4).

Type and location of the teacher shortage--Details on this point are given in Table 11. A summarized comparison of reports for 1954-55 and 1955-56 (exclusive of the District of Columbia) is as follows:

<u>Type of position</u>	<u>Number of states in which the shortage is</u>					
	<u>Very small</u>		<u>Considerable</u>		<u>Very large</u>	
	<u>1954-55</u>	<u>1955-56</u>	<u>1954-55</u>	<u>1955-56</u>	<u>1954-55</u>	<u>1955-56</u>
Rural elementary teachers	4	1	27	32	17	15
Rural secondary teachers						
Regular	27	13	19	33	1	1
*Special	6	1	33	41	8	5
Urban elementary teachers	13	12	31	32	4	4
Urban secondary teachers						
Regular	37	28	11	20	0	0
*Special	13	12	32	32	3	4

(*The term "special" applies to such fields as industrial arts and physical education.)

State departments of education were asked to list the types of teachers or subjects where the greatest shortages existed. Of the 32 answering the question: 21 listed science; 17, mathematics; 17, physical education; 14, music; 13, home economics; and 13, elementary.

education institutions produced 86,696 persons in 1954-55 qualified in their respective states for regular certificates. If it is assumed that about 66 percent of this number (or 57,000) obtain employment in teaching, then a gap of 114,000 exists between that number and the estimated 171,000 actually needed. Part of the 114,000 need is met by the employment of 80,800 emergency teachers; the remainder of the need (approximately 33,200) is not met except by enlarging classes and other improvisations.

Teacher education--So as to give a general idea of trends in the potential supply of teachers, the present series of advance estimates each October has asked for opinions on how the total enrolled in teacher education in the current year compares with the enrolment in 1940-41. The general national situation for a period of years (exclusive of the District of Columbia) is shown by the following:

<u>School year</u>	<u>Number of states reporting current enrolments as</u>		
	<u>Much smaller</u> <u>than 1940-41</u>	<u>About the same</u> <u>as 1940-41</u>	<u>Much larger</u> <u>than 1940-41</u>
1950-51	5	11	32
1951-52	3	19	26
1952-53	4	17	27
1953-54	6	18	24
1954-55	9	9	30
1955-56	4	6	38

The year 1949-50 has been the most favorable since World War II with respect to the proportion of the states reporting teacher-education enrolments as "much larger" than in 1940-41. From 1951-52 thru 1953-54 the trend was unfavorable because of the competition for manpower arising from expanding industries and governmental services, and the heavy manpower demands of the military forces. In 1954-55 there was an upward turn in teacher education enrolments which continues for 1955-56.

Consultants also were asked for opinions on how the 1955-56 enrolments in teacher education compare with the enrolments in 1954-55. One state reported that this year's enrolments are smaller; 22, that enrolments are about the same; and 25, that enrolments are much larger than in 1954-55.

In anticipation of the next few years state officials are asked to estimate how well the teacher-education enrolments in 1955-56 would meet the probable demand for teachers in the next three years. The estimates for the 48 states are given in Table 11, columns 10 and 11. Comparisons with other years may be summarized as follows:

<u>Type of teacher</u>	<u>Number of states expecting supply in the next three years</u>								
	<u>To be short</u>			<u>To be balanced</u>			<u>To be an oversupply</u>		
	<u>1953-54</u>	<u>1954-55</u>	<u>1955-56</u>	<u>1953-54</u>	<u>1954-55</u>	<u>1955-56</u>	<u>1953-54</u>	<u>1954-55</u>	<u>1955-56</u>
Elementary ...	48	45	48	0	3	0	0	0	0
Secondary	22	30	40	20	16	8	6	2	0

From a review of the foregoing opinions with regard to teacher-education enrolments it can be seen that the outlook for an adequate supply is not a favorable one. All states expect the shortage of elementary-school teachers to continue into the next three years.

With regard to secondary-school teachers 40 states expect a shortage in the next three years. In 1953-54 the number in the "oversupply" column was 6; for 1954-55 the number is 2; and for 1955-56, zero. In other words, the increasing enrolments,

<u>Year</u>	<u>Elementary</u>	<u>Secondary</u>	<u>Total</u>
1950-51	19,010,554	6,783,956	25,794,510
1951-52	19,713,202	6,998,454	26,711,656
1952-53	20,121,866	7,410,569	27,532,435
1953-54	20,029,384	7,887,319	28,916,703
1954-55	21,774,216	8,191,836	29,966,052
1955-56	22,630,933	8,607,930	31,238,863

The total of 31,238,863 for October 1955 is a substantial estimate of the number of children and youth who will be enrolled in public schools in the school year 1955-56. It is 1,272,811 above the estimated enrolment in 1954-55. The total column is more reliable than the "elementary" and "secondary" columns taken separately because of variations in the states in classifying Grades VII and VIII.

The estimates, compiled by the NEA Research Division (page 6), indicate that the 1955-56 public school enrolment, as of about October 1, exceeded the 1954-55 enrolment by 1,272,811. Early in September 1955 the U. S. Office of Education predicted that the 1955-56 enrolment would be 1,352,200 larger than in 1954-55. In November 1955 the U. S. Office of Education Circular No. 467 showed an increase of only 1,048,172. It is probable that the actual facts are an increase of about 1,300,000.

The September estimates of the U. S. Office of Education were that private and parochial schools in 1955-56 would enrol 188,900 more pupils than in 1954-55. The 1955-56 total was estimated as 4,469,900.^{3/}

For comparative purposes the public school enrolments reported by the U. S. Office of Education have been as follows:

<u>Year</u>	<u>Elementary</u>	<u>Secondary</u>	<u>Total</u>
1950-51	19,900,000	5,806,000	25,706,000
1951-52	20,680,867	5,881,797	26,562,664
1952-53	21,572,000	6,167,000	27,739,000
1953-54	22,794,000	6,389,000	29,183,000
1954-55	24,091,500**	6,582,300**	30,673,800**
1955-56	25,215,000**	6,811,000**	32,026,000**

(**Figures for 1954-55 and 1955-56 taken from press release issued September 8, 1955, by the U. S. Office of Education.)

Children deprived of full-time schooling--The steadily increasing enrolments, combined with the shortage of qualified teachers and the lack of school buildings, have produced conditions in many communities whereby thousands of children are deprived of full educational opportunities. The most obvious type of deprivation are those communities where children must attend schools in shifts or for so-called half day sessions.

Each year this series of advance estimates has attempted to present an estimate of the number of children who must attend school for less than a full day. It has been difficult to obtain complete and entirely stable statistics on the problem.

^{3/} U. S. Office of Education press release, Thursday, September 8, 1955, and November 1955, Circular No. 467, Fall 1955 Statistics on Enrollment, Teachers, and Schoolhousing in Full-Time Public and Secondary Day Schools.

The distribution of average expenditures per pupil for the two years (48 states and the District of Columbia) are as follows:

<u>Amount</u>	<u>1954-55</u>	<u>1955-56</u>
\$100-\$149	2	2
150- 199	8	8
200- 249	9	5
250- 299	17	15
300 and over	<u>13</u>	<u>19</u>
Total	49	49

The purchasing power of the 1954-55 per-pupil expenditure of \$264.58 in prewar dollars (1935-1939 base) was \$137.95; on a base of the years 1947-1949 its purchasing power was \$230.67. Both of these calculations are based upon the indexes for September 1954 (191.8 on 1935-1939 base; 114.7 on 1947-1949 base).

The purchasing power of the \$275.47 in prewar dollars is \$143.40; in 1947-1949 dollars the estimated 1955-56 per-pupil expenditure has a purchasing power of \$239.75. (For indexes see footnote, Table 6).

In 1939-40 the per-pupil expenditure averaged \$88.09 for the United States; that amount had a purchasing power of \$88.09 in prewar dollars. The gain between 1939-40 and 1955-56 is estimated as 213 percent in current dollars, but in purchasing power the gain is only 63 percent (that is, in terms of 1935-1939 dollars).

BUILDING SHORTAGE

The present lag in school construction began with the depression of the 1930's because of a lack of funds; it continued during the World War II period because of a lack of materials, funds, and manpower for construction purposes. Meanwhile the birth rates in the years since 1940 have accelerated enrolments far beyond the predictions made in the 1930's. Table 12 summarizes the reports for 1954-55.

Comparison of the conditions in the states (omitting District of Columbia) in 1954-55 and 1955-56 can be summarized as follows:

<u>Type of school</u>	<u>Number of states in which the building shortage is</u>					
	<u>Very small</u>		<u>Considerable</u>		<u>Very large</u>	
	<u>1954-55</u>	<u>1955-56</u>	<u>1954-55</u>	<u>1955-56</u>	<u>1954-55</u>	<u>1955-56</u>
Rural						
Elementary	20	20	21	22	7	6
Secondary (omitting Rhode Island)	14	14	28	29	5	4
Urban						
Elementary	0	0	27	28	21	20
Secondary	3	4	37	31	8	13

The foregoing summary suggests that the building situation for the nation as a whole has improved slightly since 1954-55 with respect to rural elementary and secondary schools.
